## Materials for one bracelet (5,5 inch without closure)
Delicas (d) colour: DB115 about 5 gramm

Swarovskis (S) colour: Vintage Rose 4 mm 27 (+ 4 for the closure beads)
The first row:

1. Take 4 d to the middle of the thread. Take 2 d on each needle and go again through the first of the two d
2. Take 4 d on one needle, cross with the other

3. 3 d on each needle, take one more on one needle, go through with the other in the same direction

4. Take 7 d on each needle and go again through the fourth

5. Take 3 d on each needle, take one d, cross with the other needle. Take 1 d on on each needle, take one more and cross
6. Take 7 d on each needle, go again through the fourth

7. Take 3 d on each needle, take one more d, go through with the other needle in the same direction
8. Take 3 d on each needle, 4 more on one of them and cross with the other needle
9. 2 d on each needle, go again through the first

Repeat from step 2 until you reach the length you want. See page 4 for possible endings.
The second row:

10. 4 d on the middle of the thread, 2 d on the lower needle and going again through the first. 1 d on the upper needle, go through the existing d of the former row and again through the new one.

11. Follow the thread path of the first row, just use the existing cross of four d for the upper needle.
12. Follow again the thread path and use the existing cross of four d for the upper needle.
13. Follow the thread path and use the existing d for the upper needle.
 Repeat from step 11
 **Make a third row like the second row.**

Two possible places to add the closure loop - depending on the length of your bracelet.
I used 19 d for each loop.

Make two closure beads:
Make a peyote piece 8 beads wide and 12 rows high, zip it up and fasten Swarovskis to the ends. Repeat for the second one.
The easy thread path to add the Swarovskis ...

The stars are showing the beginning of each thread.

or the complicated thread path, that is strengthening the netting:

The stars are showing the beginning of each thread.

The addition of the closure beads

If you feel like it you can follow the thread path more than once to strengthen the fastenings.
